

LMG series

IEC electric motor range from size 63 up to size 225

BELL-HOUSING & COUPLING SIZING

A GUIDE TO SELECT THE CORRECT BELL-HOUSING AND DRIVE COUPLING

DATA REQUIRED

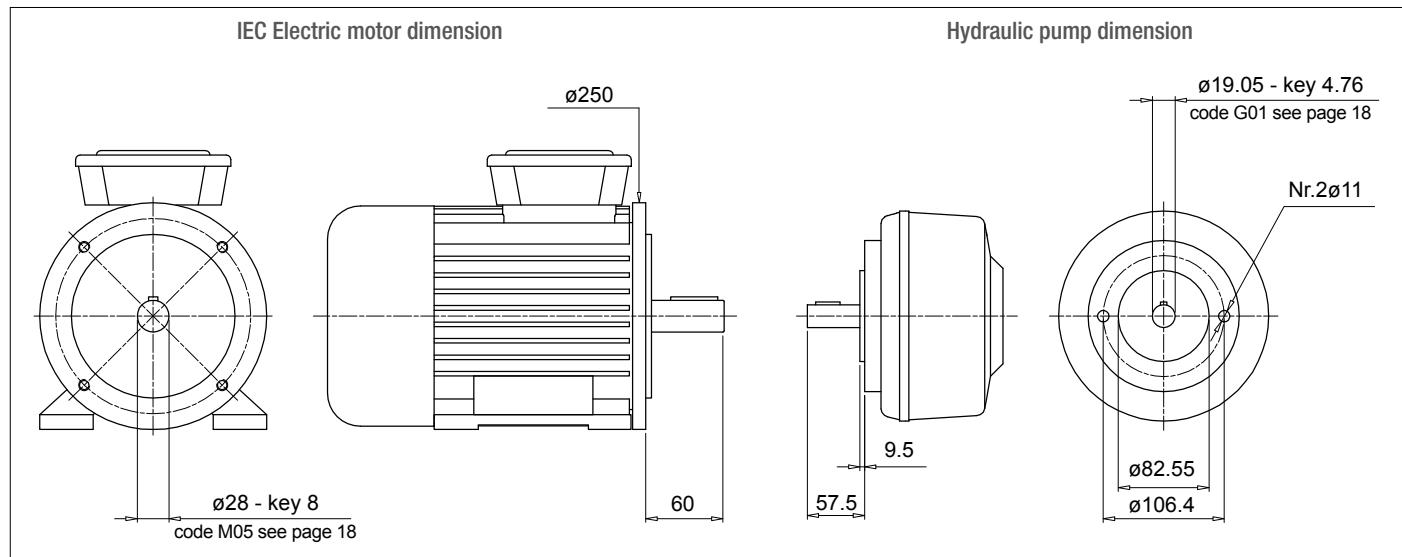

- Electric motor power/motor size
- Manufacturer and pump type

TO VERIFY:

- 1 - Pump and motor shaft dimensions (see electric motor data sheet)
- 2 - Shaft and flange pump (see pump data sheet)

Example:

- Electric motor 2.2 kW - size 100-112
- Atos pump code PFE31 - Shaft 1

Bell-Housing's length calculation

- $H = 60 + 18 + 57.5 = 135.5 \text{ mm}$ ($18 = \text{Sp spider}$ - see page 31)
- Choose type of bell-housing (LMC - LMS):
For monobloc bell-housing LMC/LDC series see pages 63 ÷ 69
For Low noise bell-housing LMS/LDS series see pages 71 ÷ 77
For Multi-components 2-3 bell housing series see pages 79 ÷ 99

Note:

The length of bell-housing must be \geq than the length calculated (135.5 mm)

Case A

Solution with monobloc bell-housing series **LMC/LDC**

Pages 63 ÷ 69 for IEC Electric motor size 100-112 - LMC250

LMC 250 bell-housing with height ≥ 135.5 - LMC250AFSQ

The bell-housing code must be completed with pump drilling code (see pages 48-49).
For the specific case:

Spigot hole 82.55 - PCD 106.4 - Nr.2 holes M10 : Drilling code 060

Definitive bell-housing code **LMC250AFSQ060**

Case B

Solution with low noise bell-housing series **LMS/LDS**

Pages 71 ÷ 77 for IEC Electric motor size 100-112 - LMS250

LMS 250 bell-housing with height ≥ 135.5 - LMS250AFSA

The bell-housing code must be completed with pump drilling code (see pages 48-49).
For the specific case:

Spigot hole 82.55 - PCD 106.4 - Nr.2 holes M10 : Drilling code 060

Definitive bell-housing code **LMS250AFSA060**

BELL-HOUSING & COUPLING SIZING

A GUIDE TO SELECT THE CORRECT BELL-HOUSING AND DRIVE COUPLING

Coupling selection

Motor half-coupling (see page 26)

For IEC Electric motor size 100/112, the half-coupling is **SGEA21M05060FG**

Spider (see page 31)

For SGEA21, EGE2 - EGE2RR

(choose spider material on the base of the application, oil, temperature and cycle machine, etc.)

Pump half-coupling

Choose the drilling code - see pages 18-19 for shaft 19.05 - key 4.76 - code: **G01**

Pump half-coupling length = BH length - THK Spider - THK Spigot

$$LMC = 138 \text{ mm} - 60 - 18 - 9.5 = 50.5 \text{ mm}$$

$$LMS = 148 \text{ mm} - 60 - 18 - 9.5 = 60.5 \text{ mm}$$

LMC - Choose the half-coupling's length at page 26 \leq 50.5 mm.

LMS - Choose the half-coupling's length at page 26 \leq 60.5 mm.

LMC - Available length for SGEA21 = 50 mm

LMS - Available length for SGEA21 = 60 mm

Half coupling for LMC: **SGEA21G01050FG**

Half coupling for LMS: **SGEA21G01050FG**

SOFTWARE FOR AUTOMATIC CALCULATION

available on the web site www.mpfiltrri.com

Vane / Piston / Screw pumps

AKA AKMM03Z0066	HYDRAULIC PUMP - Technical Data
Pump	L1: 57.5 d1: 19.05 Ch: 4.76 S: 9.5 PD: 82.55 Int: 106 Nr: 2 F: M10

Result	Monobloc Bellhousing: Modular Bellhousing: Silenced Bellhousing:
Coupling: M03 - Z0066 Drilling Pump: S060 Pump Shaft: G01 Motor Shaft: M05	Monobloc Bellhousing: Pump half-coupling with grub screw For other solution please contact technical department
CLICK HERE TO PROCEED	Modular Bellhousing: OK Silenced Bellhousing: OK

Note: for multi pumps we recommend to use a specific support on the base of the pump's dimensions and weight.

Step 1 Select "BELL-HOUSING & COUPLING"

This screenshot shows the software's main interface. On the left, a sidebar lists categories like 'Bell Housing & Coupling', 'Gear boxes', 'Vane / Piston / Screw pumps', 'Description', and 'MP FILTRI POWER TRANSMISSION'. The central area displays 'HYDRAULIC PUMP - Technical Data' with dimensions L1=12, D1=25, D2=18, H1=140, M=2, and P=H12. Below it is 'ELECTRIC MOTOR - Technical Data' with dimensions L=130, D1=120, D2=100, H=1175, and G=12. A 'Result' section shows 'Coupling material: Aluminio', 'Driving Pump: Modular Bellhousing', and 'Pump shaft: Stamped Bellhousing'. A red box highlights the 'Bell Housing & Coupling' category in the sidebar. A red button at the bottom right says 'CLICK HERE TO PROCEED'.

Step 2 Choose Manufacturer:
select "Pump type" and "Pump model"

This screenshot shows the software after selecting 'BELL-HOUSING & COUPLING'. The 'Manufacturer' dropdown is set to 'BOSCH REXROTH', 'Pump type' to 'A3V100', and 'Pump model' to 'A3V100AS'. The 'Result' section now includes 'Driving Pump: 3072', 'Pump shaft: 002', and 'Motor shaft:'. A red box highlights the 'Manufacturer' dropdown. A red button at the bottom right says 'CLICK HERE TO PROCEED'.

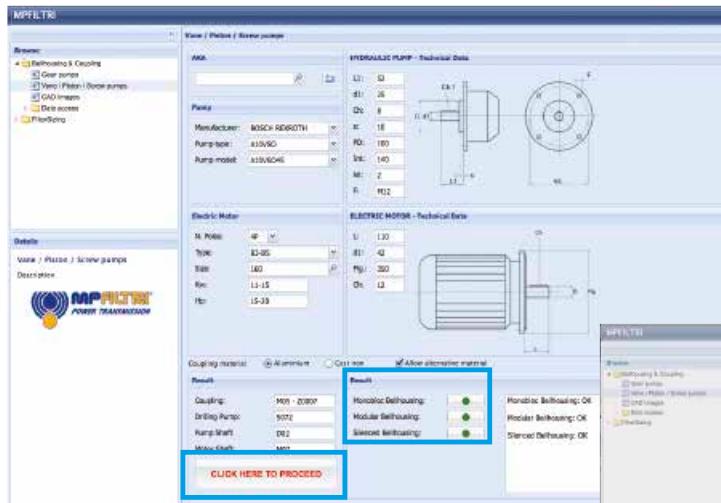

Step 3 Choose nr° of poles of "Electric motors":
select "Electric motors type" and "Electric motors size"

This screenshot shows the software after selecting 'BELL-HOUSING & COUPLING' and 'BOSCH REXROTH'. The 'Electric Motor' section shows 'S. Poles: 4P', 'Type: 60-65', 'Size: 100', 'Kw: 11.75', and 'Hp: 15.20'. The 'Result' section includes 'Coupling material: HDS - 2000T', 'Driving Pump: 3072', 'Pump shaft: 002', and 'Motor shaft: 407'. A red box highlights the 'S. Poles' dropdown. A red button at the bottom right says 'CLICK HERE TO PROCEED'.

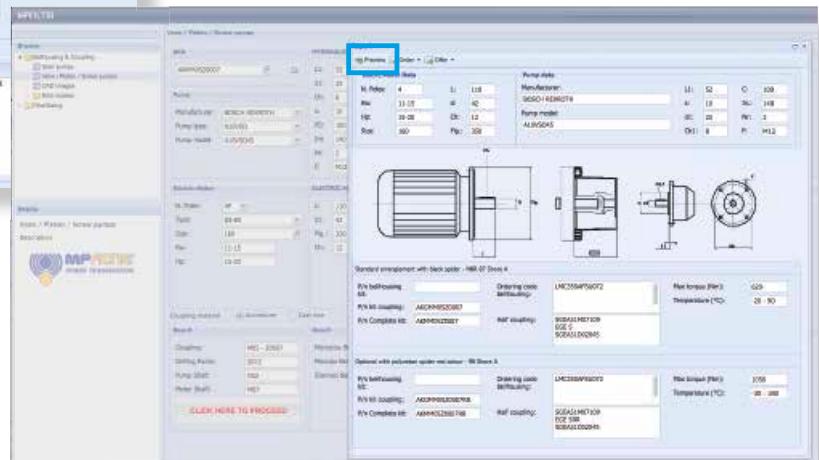

Step 4 Choose Coupling material

This screenshot shows the final configuration in the software. The 'Result' section now includes 'Driving Pump: 3072', 'Pump shaft: 002', and 'Motor shaft: H07'. A red box highlights the 'Driving Pump' dropdown. A red button at the bottom right says 'CLICK HERE TO PROCEED'.

Step 5 Push “**CLICK HERE TO PROCEED**”, then choose best solution for your application.

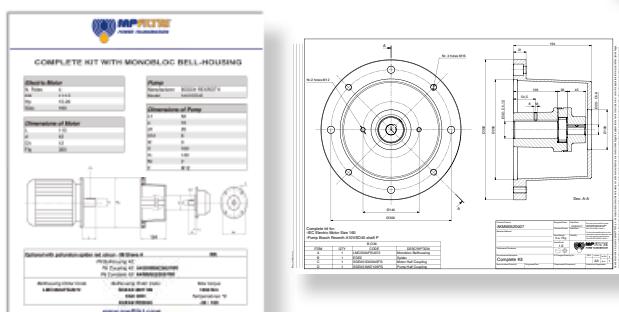

Step 6 Push “**PREVIEW**” to download the reports.

Step 7

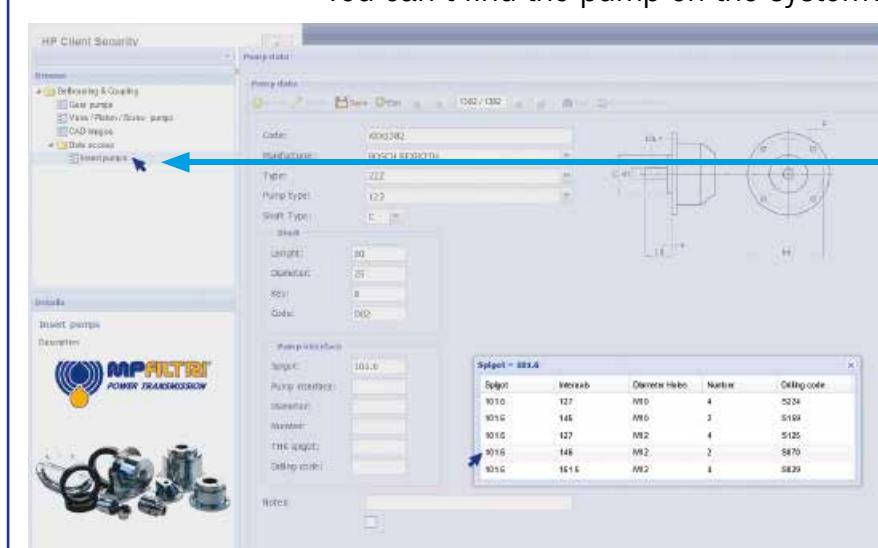

Download PDF
Datasheet and “DXF Drawing” of your selection

You can't find the pump on the system?

NEW FEATURE!!

Insert pump's dimension on the section
“**INSERT PUMP**” and follow the instructions
to achieve the couplings components code

Noise is a particularly pervasive problem so much so that there have been statutory regulations in place now for some years, designed to limit harmful occupational exposure.

Many of the machines used in industry today are equipped with oil-hydraulic systems, which happen to be a major source of noise.

① THEORY AND DEFINITION OF NOISE

From a health and hygiene standpoint, noise can be defined as an unpleasant and undesirable sound, or an unpleasant and annoying or intolerable auditory sensation (noise being any sound phenomena that may be accompanied by sensations of disturbance and pain). By definition, acoustic phenomena are oscillatory in character, propagated in a flexible medium and causing pressure variations at the points, and the areas adjacent to those points, through which they pass.

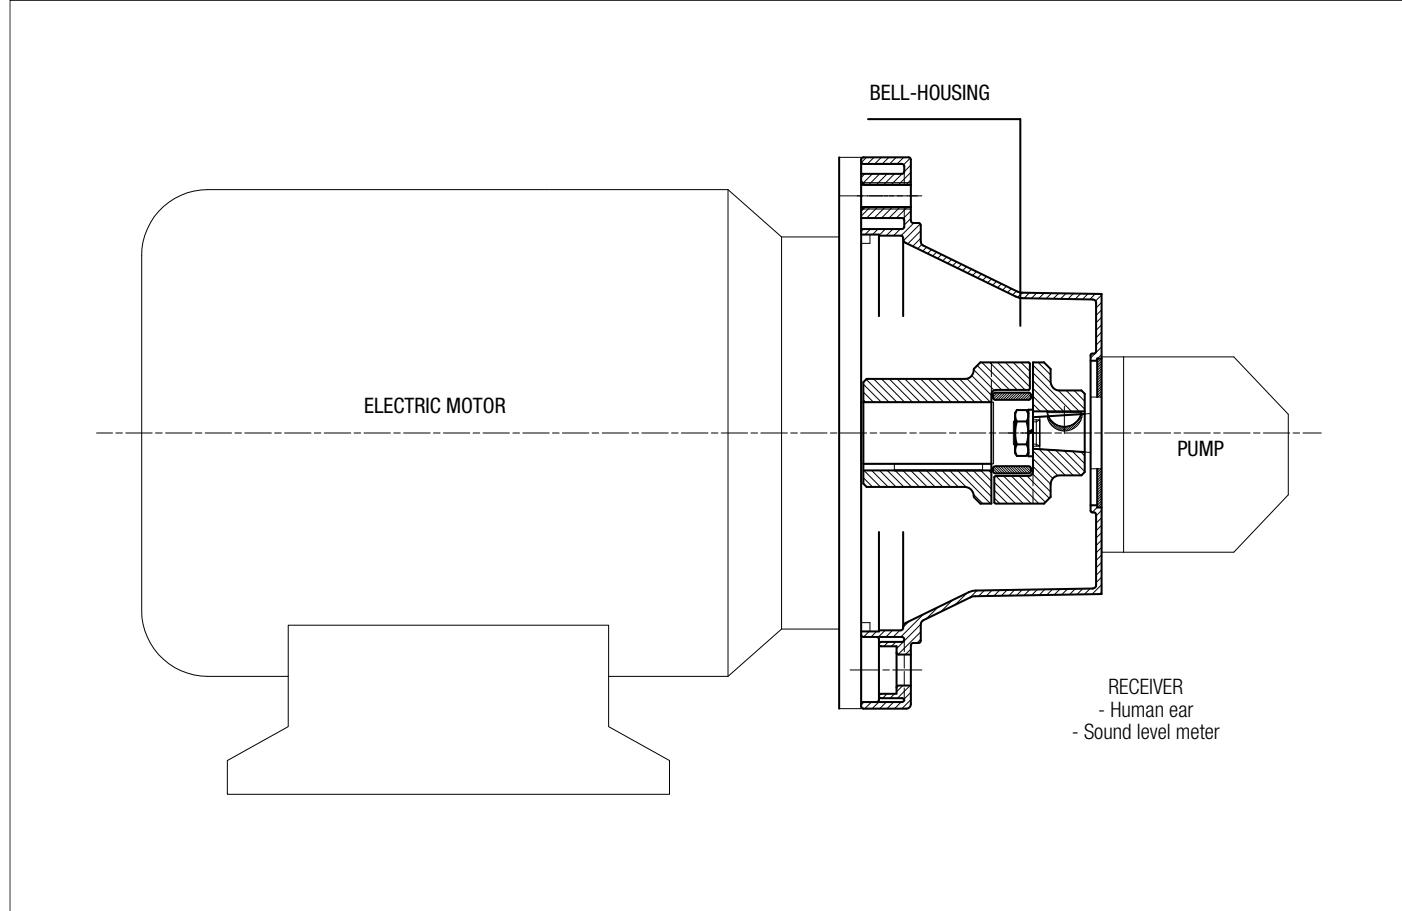

② SOUND

Technically considered, certain elements must be present simultaneously for acoustic phenomena to occur:

- Sound source
- Transmission medium
- Receive

The electric motor and the pump, together with the drive coupling, are the SOURCE OF THE NOISE. The Bell-housing is the noise transmission MEDIUM. Depending on whether the monobloc bell-housing is a rigid or low noise type, there will be variations in the flexible properties of the transmission medium. The acoustic phenomena are dissimilar in the two cases, given the differences in pressure variation and particle displacement.

MOTOR AND PUMP UNIT

Low noise bell-housing will help to attenuate the transmission of vibrations and the emission of noise generated by the system. Self-evidently, however, the mere adoption of a low noise bell-housing will achieve little unless the motor and pump are correctly installed on the machine or on the tank of the hydraulic power unit.

Should be followed in order to achieve best possible results and correct installation:

① MOTOR AND PUMP UNIT MOUNTED HORIZONTALLY ON OIL TANK LID

- The suction pipe attached to the pump must be rigid and fitted using a resilient bulkhead flange of the FTA series, which helps to cushion the vibrations propagated between the pipe and the tank lid. If pipes need to be bent, the radius of curvature must be at least 3 times the pipe diameter. Do not use elbow fittings, as these will significantly increase pressure losses.
- The pressure pipeline of the pump must be flexible and long enough to include bends with the minimum radius of curvature recommended by the manufacturer for the specified operating pressure.
- The return pipeline running from the service to the filter must be flexible. Where oil is returned directly to the tank of the hydraulic power unit through a rigid pipe, it is advisable to use a resilient bulkhead flange of the FTR series, which helps to cushion the vibrations propagated between the pipe and the tank lid.
- Anti-vibration devices (resilient mounts or damping rods) must be located under the feet of the electric motor or the PDM foot brackets, depending on the mounting position of the motor.
- The lids of hydraulic oil tanks must be sturdy enough to support the load they carry.

② MOTOR AND PUMP UNIT MOUNTED HORIZONTALLY ON MACHINE

- As a matter of good practice, the oil tank and motor-pump unit should be mounted on a single supporting frame of strength sufficient to support the load.
- If the hydraulic system is fitted with a side-mounted filter, the suction pipeline to the pump must be flexible and long enough to include bends with the minimum radius of curvature recommended by the manufacturer.
- If the suction filter is not side mounted, the pipeline should be rigid and installed in conjunction with a compensating coupling.
- The pressure pipeline of the pump must be flexible, and long enough to include bends with the minimum radius of curvature recommended by the manufacturer for the specified operating pressure.
- The return pipeline running from the service to the filter must be flexible. Where oil is returned directly to the tank of the hydraulic power unit through a rigid pipe, it is advisable to use a resilient bulkhead flange of the FTR series, which helps to cushion the vibrations propagated between the pipe and the tank lid.
- Anti-vibration devices (resilient mounts or damping rods) must be located under the feet of the electric motor or the PDM foot brackets, depending on the mounting position of the motor.

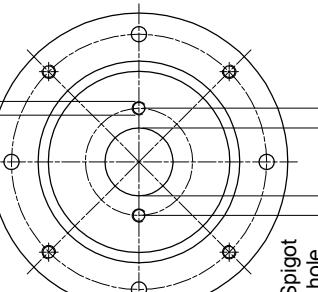

FINAL CONSIDERATION

For best results, in any event, the motor-and-pump unit should be incorporated into the hydraulic system in such a way that no one component is rigidly associated with another, resulting in the propagation of vibration, and consequently noise.

RECOMMENDED TIGHTENING TORQUES FOR MOTOR/PUMP FIXING ON THE BELL-HOUSING

LMG series

IEC electric motor range from size 63 up to size 225

Technical data

Bell-Housing - IEC electric motor range from size 63 up to size 225

Materials

- Bell-housing: Pressure die casting Aluminium
- Center ring: Galvanized Steel
- Gasket: Special paper - Guarnital

Compatibility with fluids

Modular bell-housing components compatible for use with:

- Mineral oils types HH-LL-HM-HR-HV-HC, to ISO 6743/4 standard
- Water based emulsions types HFAE-HFAS, to ISO 6743/4 standard
- Water glycol type HFC, to ISO 6743/4 standard: ask for anodized version

Temperature

From -30 °C to +80 °C

Note

For temperatures outside this range, contact
MP Filtri Technical and Sales Department

Special Applications

Any applications not covered by the normal indications contained in this catalogue must be evaluated and approved by MP Filtri Technical and Sales Department

Note: For specific information see pages 58 ÷ 60 "Table of Combination"

LMG * 4S**

Without centre ring allowing removal of half-coupling (which as a rule is keyed permanently to the pump shaft); motor mounting flange drilled with 4 clearance holes + 4 threaded holes.

Used normally for vertically mounted motor and pump units with pump submerged in the oil tank.

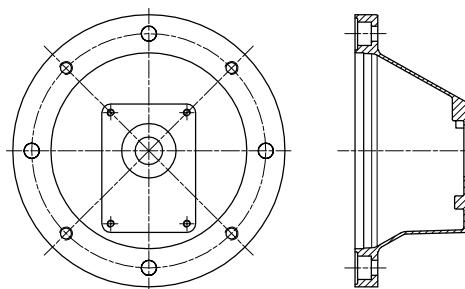

**LMG *** 4E**

With centre ring allowing removal of half-coupling (which as a rule is keyed permanently to the pump shaft), motor mounting flange drilled with 4 clearance holes + 4 threaded holes.

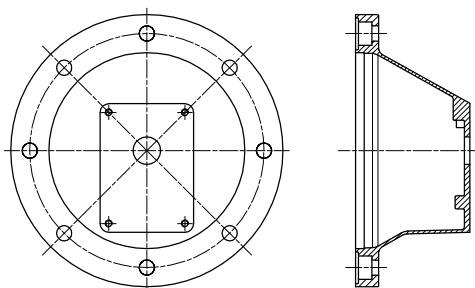

Normally used for motor and pump units mounted horizontally on the tank lid or on the machine for maximum ease of maintenance.

With this type of mounting, in effect, the hydraulic pump can be removed without removing the motor.

The half-coupling mounted to the shaft passes through the spigot hole.

**LMG *** 8S**

Without centre ring allowing removal of half-coupling (which as a rule is keyed permanently to the pump shaft), motor mounting flange drilled with 8 clearance holes. Used normally for vertically mounted motor and pump units with pump submerged in the oil tank, allows greater flexibility for directional positioning of the hydraulic pump inside the tank, according to constructional requirements.

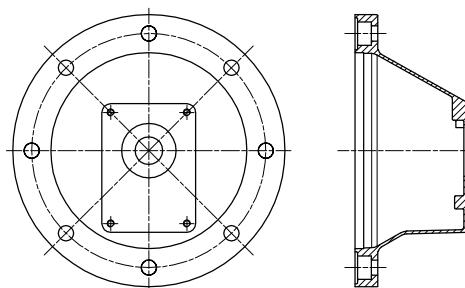

**LMG *** 8E**

With centre ring allowing removal of half-coupling (which as a rule is keyed permanently to the pump shaft), motor mounting flange drilled with 8 clearance holes.

Normally used for motor and pump units mounted horizontally on the tank lid or on the machine, offers maximum ease of maintenance and enables directional positioning of the pump.

With this type of mounting, in effect, the hydraulic pump can be removed without removing the motor.

The half-coupling mounted to the shaft passes through the spigot hole.
