

CONFIGURATION

X	Control	Standard Pilot, Atmospheric Vent
C	Cracking Pressure	30 psi (2 bar)
N	Seal Material	Buna-N
(none) Material/Coating		

This valve is a pilot to open check valve. It has a sealed pilot, a steel seat, and is vented. It allows free flow from the valve (port 2) to the load (port 1) and blocks flow in the opposite direction. Pressure at the pilot (port 3) pilot port will open the valve from port 1 to port 2. Pilot pressure needed to open the valve is directly proportional to the load pressure at port 1. The valve is insensitive to pressure at port 2 because the spring chamber is referenced out the back of the hex body.
