

MODEL RSFS

# Pilot operated, balanced poppet sequence valve CAPACITY: 120 L/min. | CAVITY: T-2A

#### CONFIGURATION

L Control Standard Screw Adjustment

A Adjustment 100 - 3000 psi (7 - Range 210 bar), 1000 psi (70 bar) Standard

(70 bar) Standard Setting

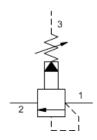

N Seal Material Buna-N(none) Material/Coating Standa

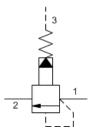

Standard Material/Coating Pilot-operated, balanced poppet sequence valves will supply a secondary circuit with flow once the pressure at the inlet (port 1) has exceeded the valve setting. The pressure setting of a sequence valve controls the pressure at port 1 relative to the pressure at the drain (port 3). These valves are insensitive to back pressure at port 2 (sequence), up to the valve setting. They may be used to regulate pressure in place of 2-port relief valves if there is pressure in the return line.

# TECHNICAL DATA

Cavity	T-2A	
Series	2	
Capacity	120 L/min.	
Factory Pressure Settings Established at 15 L/min.		
Maximum Operating Pressure	350 bar	
Response Time - Typical	10 ms	
Maximum Valve Leakage at Reseat	0,7 cc/min.	
Adjustment - Number of Clockwise Turns to Increase Setting	5	
Valve Hex Size	28,6 mm	
Valve Installation Torque 61 - 68 Nm		
Adjustment Screw Internal Hex Size 4 mm		
Locknut Hex Size	15 mm	
Locknut Torque	9 - 10 Nm	
Seal kit - Cartridge	Buna: 990-402-007	
al kit - Cartridge Polyurethane: 990-002-002		
Seal kit - Cartridge	Viton: 990-402-006	
Model Weight	0.29 kg.	

# **SYMBOLS**

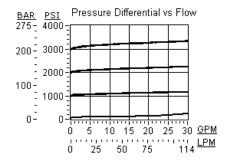

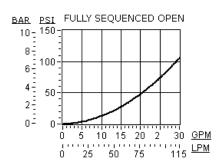

# TECHNICAL FEATURES

• All 3 port sequence cartridges are physically and functionally interchangeable (i.e. same flow path, same cavity for a given frame size).

- Pilot flow continues to increase as the pressure at port 1 (inlet), relative to the pressure at port 3 (drain), rises above the valve setting.
- The main stage orifice is protected by a 150 micron stainless steel screen.
- Pressure at port 3 is directly additive to the valve setting at a 1:1 ratio and should not exceed 5000 psi (350 bar).
- · Suitable for use in load holding applications.
- Because the modulating occurs inside the cartridge these valves are immune to most of the problems associated with cavitation, namely noise and manifold erosion.
- Will accept maximum pressure at port 2; suitable for use in cross port relief circuits.
- Incorporates the Sun floating style construction to minimize the possibility of internal parts binding due to excessive installation torque and/or cavity/cartridge machining variations.
