Direct-acting sequence valve with reverse flow check CAPACITY: 480 L/min. | CAVITY: T-19A

Direct-acting sequence valves with reverse-flow check will supply a secondary circuit with flow once the pressure at the inlet (port 1) has exceeded the valve setting. Additionally, these valves incorporate an integral check valve to provide reverse flow from port 2 (sequence) to port 1 (inlet). The pressure setting of a sequence valve controls the pressure at port 1 relative to the pressure at the drain (port 3).

TECHNICAL DATA			
Cavity	T-19A		
Series	4		
Capacity	480 L/min.		
Factory Pressure Settings Established at	30 cc/min.		
Maximum Operating Pressure	350 bar		
Response Time - Typical	2 ms		
Maximum Valve Leakage at Reseat	0,7 cc/min.		
Check Cracking Pressure	1,7 bar		
Adjustment - Number of Clockwise Turns to Increase Setting	5		
Valve Hex Size	41,3 mm		
Valve Installation Torque	475 - 508 Nm		
Adjustment Screw Internal Hex Size	4 mm		
Locknut Hex Size	15 mm		
Locknut Torque	9 - 10 Nm		
Seal kit - Cartridge	Buna: 990-019-007		
Seal kit - Cartridge	Polyurethane: 990-019-002		
Seal kit - Cartridge	Viton: 990-019-006		
Model Weight	1.66 kg.		

SYMBOLS

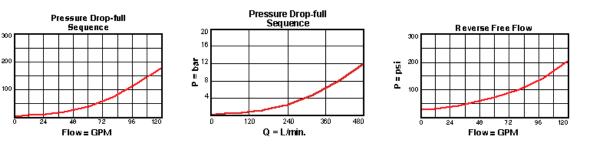

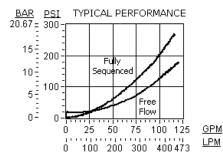

TECHNICAL FEATURES

- All 3 port sequence cartridges are physically and functionally interchangeable (i.e. same flow path, same cavity for a given frame size).
- Although this is a zero pilot flow valve, port 3 (drain) must be connected to maintain a pressure reference in the control chamber. If port 3 is blocked, reciprocating seal weepage will cause the valve to malfunction.
- Pressure at port 3 is directly additive to the valve setting at a 1:1 ratio and should not exceed 5000 psi (350 bar).
- Suitable for use in load holding applications.
- Incorporates the Sun floating style construction to minimize the possibility of internal parts binding due to excessive installation torque and/or cavity/cartridge machining variations.
