

DESCRIZIONE/DESIGN

Valvola di bilanciamento a semplice effetto, consigliata per distributori con spole a centro aperto in neutro. Collegare all'impianto come da schema. La valvola permette: flusso libero da A verso C1, sostentamento del carico con distributore in neutro o a pompa ferma, controllo del movimento di discesa del carico a seguito del pilotaggio della valvola pilotaggio, protezione da sovrapressioni nel cilindro.

Single overcenter valve, suggested for use with open centre spools. To be connected as shown. The valve allows: free flow from A to C1, to hold the load with spool in neutral position or with the pump not running, controlled movement when pilot pressure is applied, relief function against overpressure in the cylinder.
