CODICE DI ORDINAZIONE
HOW TO ORDER

Sono valvole regolatrici di flusso ad inserto filettato a 2 vie compensate alla pressione ed a regolazione fissa. Sono disponibili in tre grandezze costruttive tutte molto compatte, di piccole dimensioni e di facile montaggio. La portata viene pre-selezionata tramite il foro calibrato presente sul pistoncino compensatore e mantenuta costante (da B verso A) indipendente dalla pressione e dalla viscosità dell'olio. Nella direzione opposta il flusso (non compensato) attraversa la valvola strozzata creando una caduta di pressione dovuta e corrispondente al foro calibrato scelto.

They are flow control valves, two ways, pressure compensated and with fixed orifice. Flow setting is preadjusted through the calibrated orifice drilled on the compensator piston and is kept constant from B to A regardless of the Δp between port B to A. On the opposite direction the flow is restricted (not pressure compensated) according to the orifice size.

CARATTERISTICHE

Grandezza	1/4"- 3/8"-1/2"
