**7 OPERATING LIMITS** based on mineral oil ISO VG 46 at 50°C

The diagrams have been obtained with warm solenoids and power supply at lowest value ( $V_{nom} - 10\%$ ). The curves refer to application with symmetrical flow through the valve (i.e. P→A and B→T). In case of asymmetric flow and if the valves have the devices for controlling the switching times the operating limits must be reduced.

**8 SWITCHING TIMES** (average values in msec)

Test conditions: - 36 l/min; 150 bar  
- nominal voltage  
- 2 bar of counter pressure on port T  
- mineral oil: ISO VG 46 at 50°C

The elasticity of the hydraulic circuit and the variations of the hydraulic characteristics and temperature affect the response time.

DHE	10 - 25	20 - 40	30 - 50	15 - 25
DHE-/L1	—	—	60	60
DHE-/L2	—	—	80	80
DHE-/L3	—	—	150	150

**9 DEVICES FOR THE SWITCHING TIME CONTROL**

These devices are used to control the valve's switching time (only for DC version) and therefore reduce the hammering shocks in the hydraulic circuit.

Options L1, L2, L3 control the switching time in both moving directions of the valve spool by means of calibrated restrictors installed in the solenoid anchor.

Ordering code: **PLUG H** - **\*\***  
**08, 10, 12, 15** calibrated orifice diameter in tenths of mm  
 Example PLUG-H-12 = orifice diameter **1,2 mm**
